Is it time to light up dark fiber?

With miles of unused fiber optic cables beneath their streets, some cities are tapping into their high-speed networks to deliver next-generation solutions for education, health care and economic development.

How facial recognition technology aids police

Unlike in border control applications -- where the environment is controlled -- when supporting street policing, facial recognition algorithms make suggestions about possible similarities to police who must then confirm or refute them.

Virtual training for carrier flight deck crews

The Office of Naval Research has developed a game-based, immersive 3D virtual environment for individuals or teams training to launch and land aircraft.

Is blockchain right for your agency?

In environments with blockchain-assured trusted data, agencies can layer on powerful tools like microservices and AI to be more effective and unlock new potential.

Join us December 5th for this FCW Workshop

Attend this DevOps Workshop to hear IT leaders explore key issues that agencies must consider when adopting the DevOps methodology. They'll discuss best practices for applying DevOps to legacy systems, share key opportunities for automation, and provide strategies for integrating DevOps and SecOps. Offer input and get your questions answered.
